

**Bergerat
Monnoyeur**

THREE SYSTEMS. ONE KSEF. ZERO COMPROMISES.

Bergerat Monnoyeur Polska - the exclusive distributor of Cat® machinery in Poland - had to ensure compliance with the mandatory government e-invoicing platform across three invoicing systems, including the main ERP managed by the headquarters in Paris. Infinite GIP made this possible.

The Challenge

Bergerat Monnoyeur Polska is the exclusive, authorized distributor of Cat® construction machinery in Poland - part of the international Monnoyeur Group operating in France, Belgium, Romania, Algeria and other countries. The company serves thousands of clients across the construction, mining, and earthmoving sectors nationwide. A complex corporate structure and a history of acquisitions meant the finance department operates across few independent platforms, including ones controlled by the Paris headquarters, or integrated with Caterpillar's infrastructure. Before the KSeF project began, it was essential to deploy an integration broker (middleware) capable of translating heterogeneous data formats into the mandatory KSeF schema.

Why Infinite IT Solutions?

„We spoke with several vendors. Infinite IT Solutions was the only company that approached every constraint as a problem to be solved - not as a reason to back out. This flexibility was the deciding factor for us.”

Piotr Zalewski, IT Project Manager, Bergerat Monnoyeur Polska

Flexible Approach to Custom Requirements

The Infinite IT Solutions team never said "it can't be done." Instead, they found a solution for every challenge: non-standard data structures, conditional logic, and custom mapping rules - even for the legacy system.

Correction Module in Infinite EDI

A key foreign system lacked the capability to issue corrective invoices on its own. Infinite EDI enables the generation of corrections based on data already transmitted to KSeF - completely eliminating the need to modify the source system. Given the elimination of credit notes under KSeF regulations, this feature became business-critical for maintaining operational continuity.

Implementation Results

From day one of live operations, the system has seamlessly processed approximately 5,000 invoices per month. In the initial days post-launch, only 4–5 isolated errors were recorded - none of which impacted invoicing continuity or client relationships. Bergerat Monnoyeur's clients transitioned smoothly to receiving invoices in the new format, without any escalations or downstream issues.

The client highly values the dedication of the Infinite IT Solutions project team—particularly the Technical Account Manager, who supported the implementation at every stage, including the critical final days leading up to launch.

Day 1

stable operation from
go-live

"We went live exactly on schedule, and everything is running flawlessly! With a volume of 5,000 invoices a month, maintaining absolute process continuity, timely payments, and professional service for our clients was critical. Thanks to Infinite, this entire massive operation runs smoothly, stably, and completely hassle-free."

Piotr Zalewski, KSEF Project Manager, Bergerat Monnoyeur Polska

Implementing KSeF within a complex, multi-system environment—comprising platforms managed by foreign headquarters and a legacy system - was a high-risk venture, and delivering it within the mandated timeframe posed a significant challenge. Bergerat Monnoyeur Polska entrusted this process to Infinite IT Solutions, successfully achieving full operational readiness exactly on schedule.
